PAST-PRICE TEST · INVESTOR REPORT

What ₱1,000 could have become

An automated trading system tested on real market data from February 2020 to 19 October 2026, close to 7 years. Every peso figure is after the 20% fee, as a Filipino investor starting with ₱1,000 would have kept it.

₱1,000	₱144,751	+14375%	7 / 7
STARTING BALANCE	FINAL BALANCE, AFTER THE 20% FEE	TOTAL RETURN, AFTER THE FEE	PROFITABLE YEARS
+108%	**53 / 81**	**−44.0%**	**641**
AVERAGE PER YEAR (COMPOUNDED)	PROFITABLE MONTHS	WORST DROP FROM A HIGH	TRADES TAKEN

How it works, in plain words

The system is a set of fixed rules run by a computer. It watches large, liquid markets around the clock and only acts when its conditions are met. No guessing and no emotions.

1

You join the pool

Your ₱1,000 buys a slice of one shared trading pool. When the pool grows or shrinks, your slice moves by the same percent as everyone else's.

2

The loss is limited before every trade

Every trade has an exit point for a loss, set before the trade is opened. Each trade can lose at most about **5% of the pool**.

3

The 20% fee on new profit only

Every two months, **20% of new profit** above your best level so far is the fee. A loss means no fee, and a fee is never charged twice on the same profit.

What to expect

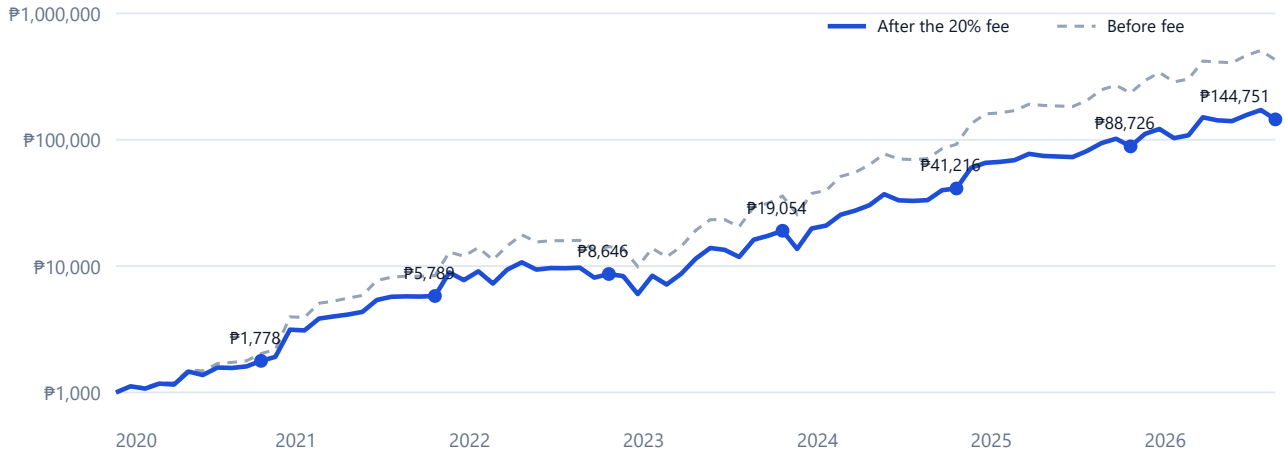

- **Most trades are small losses.** Only about 39% of trades win. The system makes money because the wins are much bigger than the losses.
- **Some months are red, sometimes several in a row.** That is normal for this kind of system. Page 9 shows every bad stretch.
- **The swings are big.** With 5% of the pool at risk per trade, an investor's balance once fell **−44%** from its high before recovering, and single months lost up to −28%.
- **It does best when markets move strongly** (big rallies or big sell-offs) and slowly gives back a little when prices drift sideways.
- **All trading costs are included:** exchange fees, slippage (getting a slightly worse price than planned) and other charges, using conservative assumptions. The 20% fee is on top and already taken out of every peso figure here.

How the compounding works. We start with ₱1,000 on 1 February 2020. During each year, every trade puts 5% of the balance the pool had on **1 January** of that year at risk. On 1 January of the next year, the size is recalculated from the new, bigger balance. So profit is **re-invested once a year**, and every year starts from the previous year's final balance. The 20% fee is taken every two months (end of February, April, June, August, October and December) from profit above your best level so far.

Download PDF

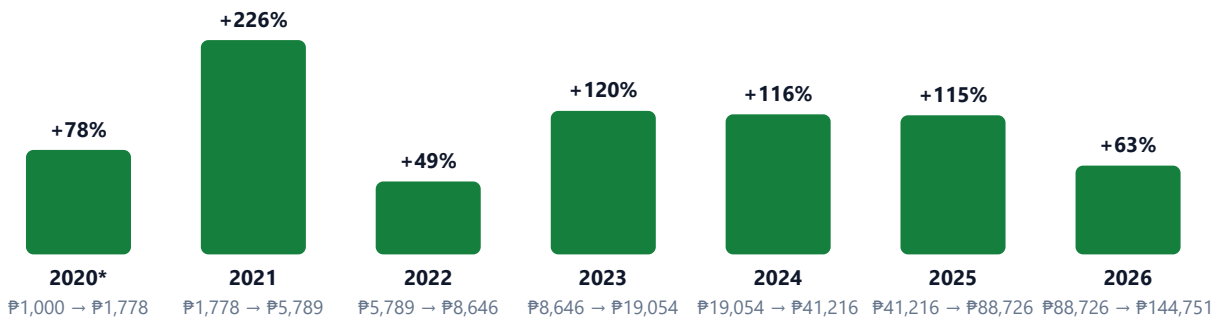

Growth of ₱1,000

Balance at the end of every month, after the 20% fee (solid) and before it (dashed). The dots show the balance at the end of each year. The scale grows evenly in percentage terms, so the same percentage gain looks the same size in 2021 as in 2025.

Return each year

Each bar is that year's gain as a percentage of the balance it started with, after the fee.

Year-by-year summary (compounded, after the 20% fee)

YEAR	START	FEE PAID	PROFIT	RETURN	END BALANCE	TRADES	GREEN / RED MONTHS
2020 from Feb	₱1,000	₱194	+₱778	+77.8%	**₱1,778**	54	6 / 11
2021	₱1,778	₱1,003	+₱4,011	+225.6%	**₱5,789**	100	10 / 12
2022	₱5,789	₱1,234	+₱2,857	+49.4%	**₱8,646**	103	7 / 12
2023	₱8,646	₱2,083	+₱10,408	+120.4%	**₱19,054**	99	7 / 12
2024	₱19,054	₱5,541	+₱22,162	+116.3%	**₱41,216**	98	9 / 12
2025	₱41,216	₱13,233	+₱47,510	+115.3%	**₱88,726**	101	8 / 12
2026	₱88,726	₱15,703	+₱56,025	+63.1%	**₱144,751**	86	6 / 10
Total	**₱1,000**	**₱38,990**	**+₱143,751**	**+14375.1%**	**₱144,751**	**641**	**53 / 81**

* 2020 starts in February (first available data). 2026 runs to 19 October 2026. Before the fee the same ₱1,000 would have reached ₱429,065; the difference is the ₱38,990 of fees, which also stops that money from compounding.

Download PDF

What if profits were re-invested more often?

This report re-invests profits **once a year**. Here are the exact same trades with the trade size updated more often. The only thing that changes is **when** the 5% trade size is recalculated from the current balance. **The figures on this page are before the 20% fee**, so they can be compared with each other.

EVERY YEAR · USED IN THIS REPORT

₱429,070

Biggest drop: **−47.7%**

Trade size = 5% of the balance on 1 January, kept all year.

EVERY MONTH

₱1,380,790

Biggest drop: **−61.0%**

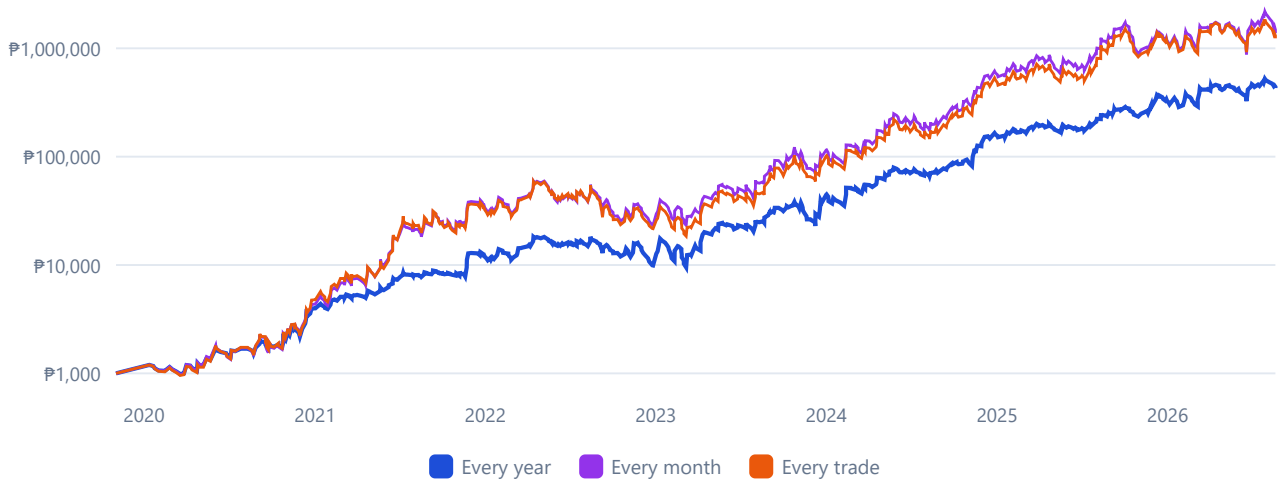

Trade size = 5% of the balance at the start of each month.

EVERY TRADE

₱1,238,280

Biggest drop: **−68.6%**

Trade size = 5% of the balance when each trade opens.

Where ₱1,000 ends up each year (before the fee)

YEAR	EVERY YEAR	EVERY MONTH	EVERY TRADE
2020	₱2,031 +103.1%	₱2,162 +116.2%	₱2,150 +115.0%
2021	₱8,398 +313.5%	₱25,070 +1059.9%	₱23,816 +1007.6%
2022	₱14,262 +69.8%	₱32,868 +31.1%	₱30,190 +26.8%
2023	₱35,812 +151.1%	₱105,541 +221.1%	₱86,527 +186.6%
2024	₱91,991 +156.9%	₱321,203 +204.3%	₱271,250 +213.5%
2025	₱234,733 +155.2%	₱881,665 +174.5%	₱833,558 +207.3%
2026	₱429,065 +82.8%	₱1,380,791 +56.6%	₱1,238,277 +48.6%
Biggest drop ever	**−47.7%**	**−61.0%**	**−68.6%**

Bigger numbers, bigger drops. Re-investing more often makes winning streaks grow faster, but it also makes losses bigger right after the account has grown. The deepest drop goes from −48% (yearly) to −61% (monthly) and −69% (every trade). The rest of this report uses the yearly method because it is the easiest to follow and has the smallest drops.

June	9	₱5,146.50	−₱8,155.06	−5.4%	₱142,243.54
July	7	–	−₱1,707.25	−1.2%	₱140,536.29
August	13	₱3,678.73	+₱16,422.16	+11.7%	₱156,958.45
September	8	–	+₱14,757.11	+9.4%	₱171,715.55
October	8	–	−₱26,964.17	−15.7%	₱144,751.38
2026 total	**86**	**₱15,702.95**	**+₱56,024.93**	**+63.1%**	**₱144,751.38**

Each trade this year put about **₱4,436.32** of your balance at risk (5% of the ₱88,726.46 you had on 1 January). The test ends on 19 October 2026.

The hard parts: losses and drawdowns

This page shows the bad stretches so you know what to expect. A **drawdown** is how far your balance fell below its highest point before it recovered. Figures are for your balance after the 20% fee, measured at month ends.

−44.0%	−28.3%	3 months	12
DEEPEST DRAWDOWN	WORST SINGLE MONTH	LONGEST RED STREAK	MOST LOSING TRADES IN A ROW

How far below its high your balance was, over time

The deepest drop was **−44.0%**, from the high in June 2022 to the low in February 2023. On a ₱1,000 balance that is about ₱440 lost from the top before the balance recovered and moved higher.

Losing months in a row

PERIOD	RED MONTHS	COMBINED LOSS	MONTHS IN THAT STREAK
June 2025 – August 2025	3	−5.9%	Jun −3.9% · Jul −1.0% · Aug −1.1%
January 2023 – February 2023	2	−30.5%	Jan −3.7% · Feb −27.9%
August 2023 – September 2023	2	−15.3%	Aug −3.6% · Sep −12.1%
August 2024 – September 2024	2	−11.5%	Aug −10.7% · Sep −0.9%
June 2026 – July 2026	2	−6.6%	Jun −5.4% · Jul −1.2%

Be ready for this. In 27 of 81 months (33%) your balance went down. There were stretches of 12 losing trades in a row. Someone who stops after a few bad months usually misses the big winning months that follow (for example, after the red month of January 2024, the balance gained +116% that year). The future can also bring a drawdown **deeper** than anything shown here.

Patterns: which months and quarters are weaker?

Extra statistics on all 81 months of the test, grouped by calendar month and by quarter. They show **when** the losing months tend to happen, and what the market looked like in those months. Results are after the 20% fee.

Average result per calendar month

Bar = the average % gain of that month across all years. Below = how many times that month ended red. Paler bars had more red years. The shaded block is the weakest quarter.

By quarter

Q1 · JAN–MAR

6 / 20 red

Average month **+12.3%**
Winning trades 40%
Price movement 36% / month

Q2 · APR–JUN

6 / 21 red

Average month **+8.9%**
Winning trades 41%
Price movement 24% / month

Q3 · JUL–SEP · WEAKEST

10 / 21 red

Average month **+5.1%**
Winning trades 39%
Price movement 26% / month

Q4 · OCT–DEC · FEWEST REDS

5 / 19 red

Average month **+4.2%**
Winning trades 35%
Price movement 31% / month

Each quarter, each year

	2020	2021	2022	2023	2024	2025	2026
Q1	+12%	+74%	+57%	−3%	+10%	+62%	+16%
Q2	+3%	+34%	+18%	+36%	+45%	+11%	+38%
Q3	+36%	+38%	−10%	+3%	+8%	+10%	+21%
Q4	+13%	+1%	−10%	+62%	+26%	+9%	−16%

Q4 2026 only covers 1–19 October.

Why do the red months happen?

Each dot is one month of the test. Left to right = how much the markets moved that month. Up/down = how your balance did after the fee.

Red months vs green months

The system makes money from strong, one-directional moves. We compared the market in the 27 red months with the 54 green months:

AVERAGE OVER THE MARKETS	RED MONTHS	GREEN MONTHS
Price movement in the month	18%	35%
Average result of your balance	−8.7%	+15.8%
Number of months	27	54

In short: red months are **quiet, choppy months**. Prices moved about half as much and went sideways more, so trades kept failing. **Jul–Sep** is usually the calmest stretch for these markets, which is why 10 of its 21 months were red. August was red 4 of 7 times. May never ended red. Calm months mostly cost a little, while big trending months make the year.

Treat this as a tendency, not a rule. Each calendar month appears only 6–7 times, so a single year can change the picture. The weak quarter moves around from year to year. We do **not** switch the system off in any season, because some of the best months fell inside the "weak" quarter.

Important notes

Please read before drawing any conclusions from this report.

What this test is

- A **test on past prices**: the trading rules were applied to historical prices to see what *would* have happened. It is a simulation, not a record of real trades.
- Prices are real market data from a major exchange, February 2020 to 19 October 2026. Decisions are made only on information that was available at the time, and the test was checked to make sure it never "peeks" at future prices.
- Costs are set on the conservative side: 0.08% exchange fee on every buy and sell, plus 0.05% slippage on every fill, plus the other charges of the period.
- The **20% fee** is taken every two months from new profit above your best level so far, as it would be in the real pool. Every peso figure in this report (except page 3) is after that fee.
- Several markets are traded from one account. Their good and bad periods often fall at different times, which smooths the overall result.

What this test is not

- **Not a promise.** Past results, simulated or real, do not guarantee future returns. Markets change, and a strategy that worked before can stop working.
- Real trading can differ from the simulation: exchange outages, sudden price gaps, minimum order sizes and delays can make real results worse.
- The rules were developed while looking at historical data, so some of the past performance may be better than what can be repeated.
- **5% risk per trade is aggressive.** It produces the large growth shown here, but also the deep drops on page 9. Lower risk means smaller swings and smaller returns.
- **The peso is not modelled.** Results were computed in dollars and shown as ₱1,000 for easy reading. A stronger or weaker peso would change what your balance is worth in pesos.
- These markets are very volatile. **Only use money you can afford to lose.**

The numbers in one line per year

YEAR	START	END	RETURN	BEST MONTH	WORST MONTH
2020	₱1,000.00	₱1,777.88	+77.8%	Jul +27.0%	Aug −6.1%
2021	₱1,777.88	₱5,788.52	+225.6%	Feb +64.1%	Mar −1.1%
2022	₱5,788.52	₱8,645.98	+49.4%	Jan +53.9%	Apr −20.0%
2023	₱8,645.98	₱19,053.93	+120.4%	Mar +39.6%	Feb −27.9%
2024	₱19,053.93	₱41,216.16	+116.3%	Feb +45.0%	Jan −28.3%
2025	₱41,216.16	₱88,726.46	+115.3%	Jan +45.6%	Dec −12.9%
2026	₱88,726.46	₱144,751.38	+63.1%	May +38.8%	Oct −15.7%

Compounded vs. starting fresh each year

Same test, two ways to look at it. **Left:** one ₱1,000 left in since the start, so every year builds on the last. **Right:** a fresh ₱1,000 on the first day of each year, nothing carried over, so every row stands on its own. Both are after the 20% fee.

Compounded (left in since 2020)

YEAR	START	END	RETURN
2020	₱1,000	₱1,778	+78%
2021	₱1,778	₱5,789	+226%
2022	₱5,789	₱8,646	+49%
2023	₱8,646	₱19,054	+120%
2024	₱19,054	₱41,216	+116%
2025	₱41,216	₱88,726	+115%
2026	₱88,726	₱144,751	+63%
7 years	**₱1,000**	**₱144,751**	**+14375%**

Fresh ₱1,000 each year (not compounded)

YEAR	START	END	RETURN
2020	₱1,000	₱1,778	+78%
2021	₱1,000	₱3,256	+226%
2022	₱1,000	₱1,494	+49%
2023	₱1,000	₱2,124	+112%
2024	₱1,000	₱2,163	+116%
2025	₱1,000	₱2,153	+115%
2026	₱1,000	₱1,617	+62%
Average	**₱1,000**	**₱2,083**	**+108%**

The right-hand side is the easier one to picture: put ₱1,000 in on January 1, take it out on December 31, and that is what you would have had. The left shows what happens when you leave the profit in year after year. Neither is a promise.

> Results are shown for a ₱1,000 start so they are easy to scale. A ₱10,000 start would show every peso figure ×10, and the percentages stay the same.
