PAST-PRICE TEST · INVESTOR REPORT

What ₱1,000 could have become

Two automated trading systems, run together as one pool and tested on real market data from March 2020 to 20 October 2026, about 6.6 years. Every peso figure is after the 20% fee, as a Filipino investor starting with ₱1,000 would have kept it.

₱1,000	₱2,601,451	×2,601	7 / 7
STARTING BALANCE	FINAL BALANCE, AFTER THE 20% FEE	GROWTH OF THE STARTING BALANCE	PROFITABLE YEARS

+228%	57 / 80	−50.5%	2,089
AVERAGE PER YEAR (COMPOUNDED)	PROFITABLE MONTHS	WORST DROP FROM A HIGH	TRADES TAKEN

How it works, in plain words

The pool runs two systems, each a set of fixed rules run by a computer. They watch liquid markets around the clock and only act when their conditions are met. No guessing and no emotions. Half of the money is with each system.

1

You join the pool

Your ₱1,000 buys a slice of one shared trading pool. When the pool grows or shrinks, your slice moves by the same percent as everyone else's.

2

The loss is limited before every trade

Every trade has an exit point for a loss, set before the trade is opened. Each trade puts **2.5% of its system's money** at risk.

3

The 20% fee on new profit only

Every two months, **20% of new profit** above your best level so far is the fee. A loss means no fee, and a fee is never charged twice on the same profit.

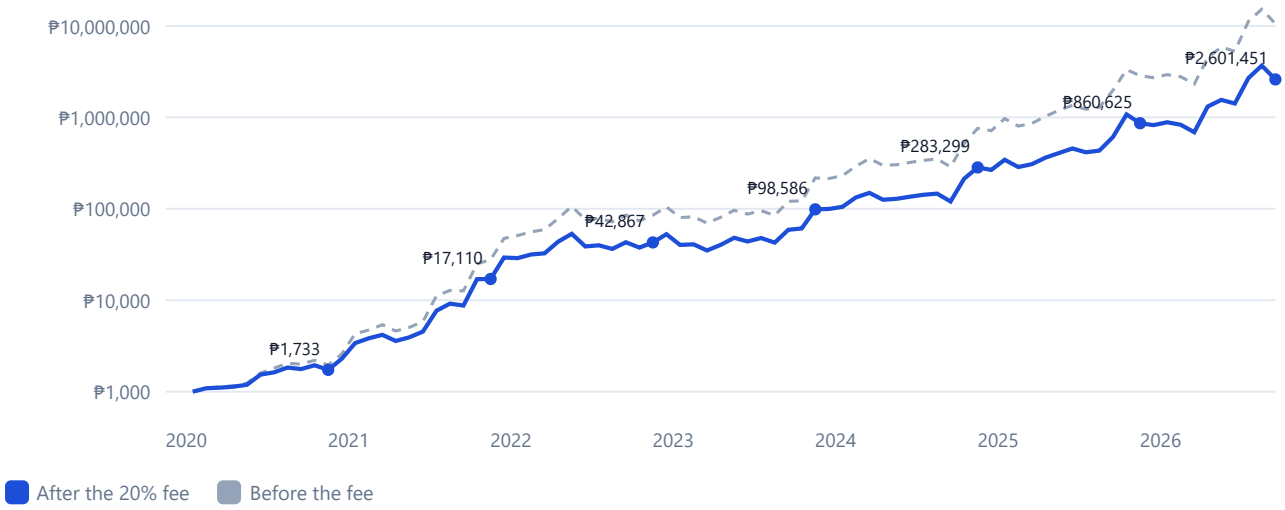

What to expect

- **Most trades are small losses.** Only about 35% of trades win. Money is made because the wins are much bigger than the losses.
- **Some months are red, sometimes several in a row.** That is normal for this kind of system. Page 9 shows the bad stretches.
- **The swings are big.** With 2.5% put at risk per trade, an investor's balance once fell **−51%** from its high before recovering, and the worst single month lost 29%.
- **It does best when markets move strongly** (big rallies or big sell-offs) and slowly gives back a little when prices drift sideways.
- **All trading costs are included:** exchange fees, slippage (getting a slightly worse price than planned), funding charges and other costs. The 20% fee is on top and already taken out of every peso figure here.

How the compounding works. We start with ₱1,000 on 1 January 2020 (the first trade came in March 2020). Each system keeps its own balance, and **every trade puts 2.5% of that balance at risk**, measured when the trade opens. Wins make the next trade a little bigger and losses make it smaller, so profit is **re-invested trade by trade**. The 20% fee is taken every two months (end of February, April, June, August, October and December) from profit above your best level so far. The last, partial month is settled on the last day of data.

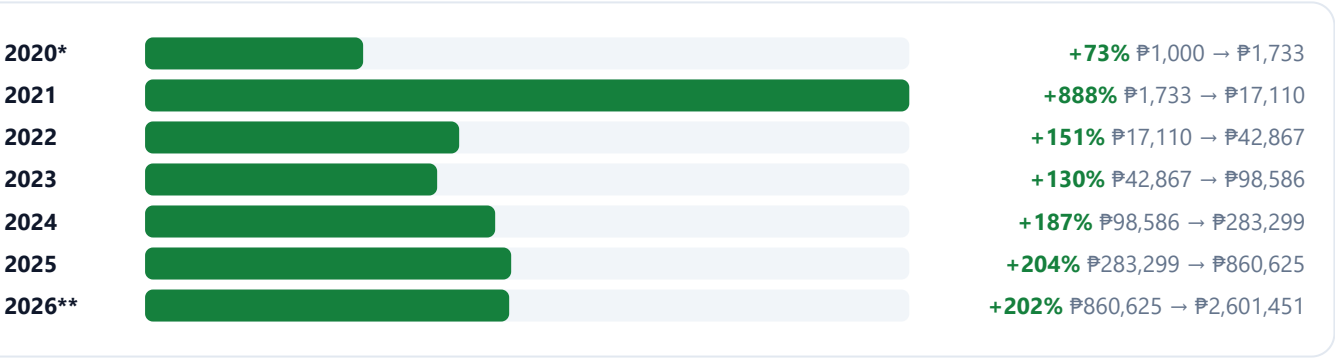

Growth of ₱1,000

Balance at the end of every month, after the 20% fee (solid) and before it (dashed). The dots show the balance at the end of each year. The scale grows evenly in percentage terms, so the same percentage gain looks the same size in 2021 as in 2025.

Return each year

Each bar is that year's gain as a percentage of the balance it started with, after the fee. (Bar lengths are scaled so small years stay visible.)

Year-by-year summary (compounded, after the 20% fee)

YEAR	START	FEE PAID	PROFIT	RETURN	END BALANCE	TRADES	GREEN / RED MONTHS
2020 from Mar	₱1,000	₱192	+₱733	+73.3%	₱1,733	142	8 / 2
2021	₱1,733	₱3,836	+₱15,378	+887.6%	₱17,110	286	10 / 2
2022	₱17,110	₱9,024	+₱25,757	+150.5%	₱42,867	327	8 / 4
2023	₱42,867	₱11,345	+₱55,719	+130.0%	₱98,586	358	8 / 4
2024	₱98,586	₱46,178	+₱184,713	+187.4%	₱283,299	341	10 / 2
2025	₱283,299	₱144,332	+₱577,326	+203.8%	₱860,625	343	8 / 4
2026	₱860,625	₱457,978	+₱1,740,826	+202.3%	₱2,601,451	292	5 / 5
Total	**₱1,000**	**₱672,884**	**+₱2,600,451**	**+260,045%**	**₱2,601,451**	**2,089**	**57 / 23**

* 2020 starts in March 2020 (first trade). ** 2026 runs to 20 October 2026. Before the fee the same ₱1,000 would have reached ₱10,550,347; the difference is the ₱672,884 of fees, which also stops that money from compounding.

What if each trade risked less?

The exact same trades, with a smaller part of each system's money put at risk per trade. The only thing that changes is the risk size. All figures are **after the 20% fee**, starting from ₱1,000.

₱9,194

Biggest drop from a high: **−13.9%**
Worst single month: **−7%**
Profitable months: **57 / 80**
Profitable years: **7 / 7**

Bigger numbers, bigger drops. Risking 2.5% per trade grew ₱1,000 to ₱2,601,451, against ₱54,443 at 1% and ₱9,194 at 0.5%. The price is the ride: the deepest fall goes from −14% (0.5%) to −24% (1%) and −51% (2.5%). The rest of this report uses 2.5%, the setting the pool actually trades with.

The 2.5% rows are the extreme case. A drop of about 51% means an investor who had ₱100,000 could have seen about ₱50,516 disappear from the top before the balance recovered. Anyone who cannot sit through that should not look at the biggest number on this page.

Monthly calendar

Every month at a glance. Green = your balance grew that month, red = it shrank. Numbers are the % change of your balance **after the 20% fee**.

Month that grew Month that shrank Not in test period

Monthly profit in pesos

The same months, as the peso profit or loss on the balance you had at that time, after the fee. Fees are taken in the even months (Feb, Apr, Jun, Aug, Oct, Dec) when your balance is above its best level. These grow with the balance, so late months look large in pesos.

	JAN	FEB	MAR	APR	MAY	JUN	JUL	AUG	SEP	OCT	NOV	DEC	YEAR

2026 total	**292**	**₱457,978**	**+₱1,740,826**	**+202.3%**	**₱2,601,451**

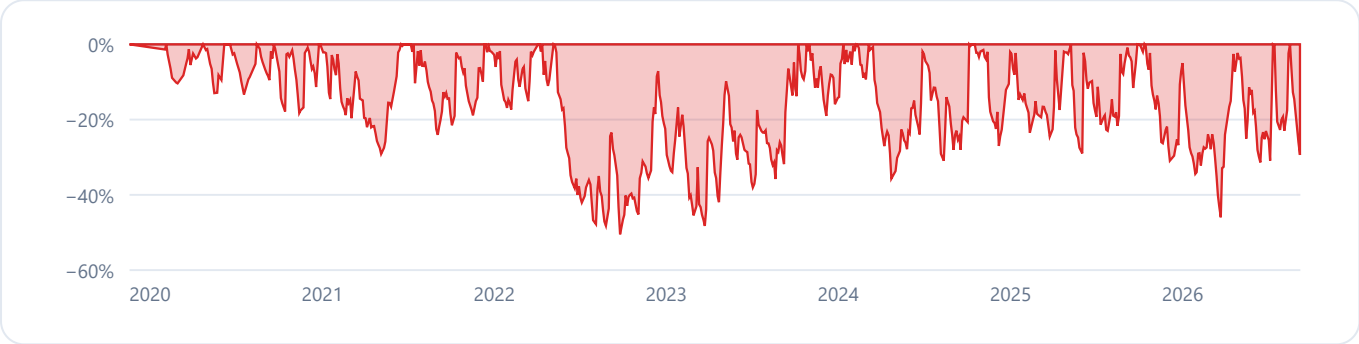

Each system started the year with ₱430,313, so one trade put about ₱10,758 of it at risk at the start (2.5%), more as the balance grew. The test ends on 20 October 2026.

The hard parts: losses and drawdowns

This page shows the bad stretches so you know what to expect. A **drawdown** is how far your balance fell below its highest point before it recovered. Figures are for your balance after the 20% fee, measured after every closed trade.

−50.5%	−29.4%	2 months	25
DEEPEST DRAWDOWN	WORST SINGLE MONTH	LONGEST RED STREAK	MOST LOSING TRADES IN A ROW

How far below its high your balance was, over time

The deepest drop was **−50.5%**, from the high in June 2022 to the low in November 2022. In pesos it went from ₱60,946 down to ₱30,158 before the balance recovered and moved higher.

Losing months in a row

PERIOD	RED MONTHS	COMBINED RESULT	MONTHS IN THAT STREAK
Dec 2025 – Jan 2026	2	−23.9%	Dec, Jan
Mar 2026 – Apr 2026	2	−21.9%	Mar, Apr

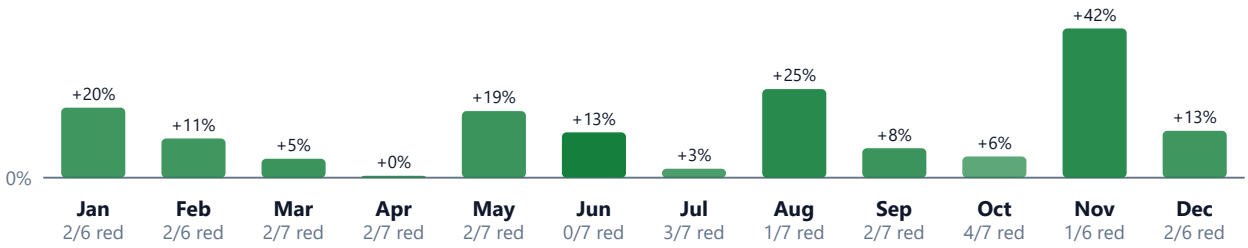

Be ready for this. In 23 of 80 months (29%) your balance went down. There were stretches of 25 losing trades in a row. Someone who stops after a few bad months usually misses the big winning months that follow. The future can also bring a drawdown deeper than anything shown here.

Patterns: which months and quarters are weaker?

Extra statistics on all 80 months of the test, grouped by calendar month and by quarter. They show when the losing months tend to happen. Results are after the 20% fee.

Average result per calendar month

Bar = the average % change of that month across all years. Below each month = how many times it ended red. Paler bars had more red years. A few huge months pull some averages up a lot, so read them as a guide, not a rule.

By quarter

Q1 · Jan–Mar
6 / 19 months red
Average month **+11.6%**
Winning trades **35%**

Q2 · Apr–Jun · fewest reds

Each quarter, each year

	2020	2021	2022	2023	2024	2025	2026
Q1	+9%	+121%	+85%	−5%	+35%	+1%	−3%
Q2	+9%	+3%	+68%	+18%	−3%	+42%	+86%
Q3	+54%	+134%	−32%	−11%	+14%	+7%	+138%
Q4	−6%	+86%	+18%	+131%	+94%	+99%	−29%

2020 starts in March, so its Q1 is only March. Q4 2026 only covers 1 October to 20 October 2026.

How these numbers were made, and what they leave out

Method

- **The trades.** The real trading rules of the two systems, unchanged, replayed on stored 4-hour price candles for five liquid markets from 2020 to 20 October 2026. Exchange fees, slippage and funding charges are already inside every trade's result.
- **The money.** The ₱1,000 is split in half between the two systems. Each trade puts 2.5% of its own system's balance at risk when it opens, and the profit or loss is booked when the trade closes. Trades from all markets share the system's balance, and are processed in time order.
- **The fee.** 20% of profit above the investor's best level so far, taken at the end of every even month, and on the last day of data for the last partial month. A loss means no fee, and the best level only moves up.
- **Calendar.** A month counts the trades that closed in it. Year tables use a calendar year and carry the balance over. Trades still open at the end of the data are not counted.

What it leaves out

- **Hindsight.** The markets and the rule settings were chosen on this same history. Treat the figures as an upper bound, not a forecast.
- **No ceiling on trade size.** The test lets each trade grow with the balance. In real trading a cap on how much is risked per trade, and the room that the markets have to take larger orders, would slow growth once the balance is large. The big late-year pesos here would not be reached in the same way.
- **Small accounts.** Exchanges sell whole contracts. A ₱1,000 slice of the pool is not traded on its own; it buys part of one pool. The pool's early trades would have been lumpier than shown.
- **Trades open together.** Several trades can be open at once and are sized from the same balance, so a real run can fall a little further than shown.
- **Late or skipped trades.** Trades the live system skips because margin is short, or enters late, are not modelled.
- **Two systems, one story.** A few giant winning trades carry a large part of the result. Take them out and the totals look much smaller.

The same trades, two ways to read the years

Compounded (left in since 2020)

YEAR	START	END	RETURN
2020	₱1,000	₱1,733	+73%
2021	₱1,733	₱17,110	+888%
2022	₱17,110	₱42,867	+151%
2023	₱42,867	₱98,586	+130%
2024	₱98,586	₱283,299	+187%
2025	₱283,299	₱860,625	+204%
2026	₱860,625	₱2,601,451	+202%
7 years	**₱1,000**	**₱2,601,451**	**+260,045%**

Fresh ₱1,000 each year (not compounded)

YEAR	START	END	RETURN
2020	₱1,000	₱1,733	+73%
2021	₱1,000	₱6,708	+571%
2022	₱1,000	₱1,780	+78%
2023	₱1,000	₱2,646	+165%
2024	₱1,000	₱2,246	+125%
2025	₱1,000	₱3,025	+203%
2026	₱1,000	₱2,709	+171%
Average	**₱1,000**	**₱2,978**	**+198%**

The right-hand side is the easier one to picture: put ₱1,000 in on January 1, take it out on December 31, and that is what you would have had. The left shows what happens when you leave the profit in year after year. Neither is a promise.

This is a test on past prices, not a promise. Real results will differ, and you can lose a large part or all of the money you put in. Only use money you can afford to lose. A ₱10,000 start would show every peso figure ×10, and the percentages stay the same.
