PAST-PRICE TEST · BB-CORE AND I-CORE

Trades, monthly profit and ₱10,000 results

BB-Core and I-Core on the same five coins (SOL, ZEC, NEAR, ADA, GALA), 31 Jan 2020 to 26 Oct 2026 (82 months). How many trades each bot takes, how many months make and lose money, and what ₱10,000 turns into at the live 2.5% risk.

18.4	9.3	61 of 82	43 of 82
BB-CORE: AVERAGE TRADES PER MONTH	I-CORE: AVERAGE TRADES PER MONTH	BB-CORE: MONTHS IN PROFIT (74%)	I-CORE: MONTHS IN PROFIT (52%)

BB-CORE: $100 AT THE BOT'S OWN SETTINGS, FINAL	I-CORE: $100 AT THE BOT'S OWN SETTINGS, FINAL	BB-CORE: PROFITABLE YEARS (₱10,000, 2.5%)	I-CORE: PROFITABLE YEARS (₱10,000, 2.5%)

The short answer

- **BB-Core trades about twice as often.** 18.4 trades a month against 9.3 for I-Core (about 221 against 112 a year). Since 2021 the steady rate is about 20 and 10.
- **BB-Core is the steadier earner.** It makes money in 74% of months and its worst month is −8.1%. I-Core makes money in only 52% of months, but its winners are huge (best month +68%).
- **Every calendar year was positive for both bots** with a fresh ₱10,000 every January at 2.5% risk. Year-end balances ran from ₱20,845 to ₱66,557 for BB-Core and from ₱13,284 to ₱61,352 for I-Core.
- **Treat the numbers as an upper bound.** It is a test on past prices. The coins and settings were chosen with hindsight, and the first small trades on a ₱10,000 account may not be fillable (contract sizes).

> **Read the tables like this.** Green cells made money, red cells lost money, a dash means that month is outside the data. A trade counts in the month it was *entered* when we count trades, and in the month it *closed* when we count profit, because that is when the profit is real. The last month, October 2026, stops on the 26th.

1. How many trades each month

All five coins together. Entry month (UTC). 31 Jan 2020 to 26 Oct 2026.

	BB-CORE	I-CORE
Total trades	1510	762
Average trades per month	**18.4**	**9.3**
Typical (median) month	20	9
Busiest month	27	20
Quietest month	0	0
Days that had a trade	942	567
Average trades on a day that has any	1.6	1.3
Closed trades per coin (SOL / ZEC / NEAR / ADA / GALA)	309 / 332 / 298 / 328 / 243	152 / 165 / 151 / 176 / 116

> The two zero months for each bot are Jan and Feb 2020. The data starts on 31 Jan 2020 and the indicators need warm-up candles, which also pulls the overall averages down a little.

Average by calendar month (all years together)

	JAN	FEB	MAR	APR	MAY	JUN	JUL	AUG	SEP	OCT	NOV	DEC
BB-Core	18.1	16.1	17.7	17.6	19.6	16.0	18.1	18.1	18.1	21.0	20.0	21.0
I-Core	6.9	8.6	9.7	8.6	9.4	10.3	9.6	8.9	7.7	11.7	9.3	11.2

> Both bots are busiest in **October and December**. BB-Core stays between 14 and 27 trades a month from 2021 on; I-Core swings a lot more.

3. Monthly profit at the bots' own settings

Taken from each bot's bot-config.json. One continuous account, sized trade by trade from the balance at that moment. Profit is counted in the month a trade closed.

2024	₱19,520 (+95%)	₱18,960 (+90%)	₱246,444 (+24%)	₱19,520
2025	₱36,250 (+262%)	₱38,648 (+286%)	₱328,492 (+33%)	₱33,869
2026	₱24,505 (+145%)	₱27,074 (+171%)	₱384,277 (+17%)	₱24,363

How to read it. *Every trade* resizes the risk after each closed trade. *Every month* keeps the risk fixed for the whole month, worked out from the balance on the 1st. The two end very close, with monthly slightly ahead in most years. *Carried over* never resets, so it shows what one account would have become. Once the balance passes about ₱25,000 the $10 cap takes over and growth turns almost straight-line, which is why BB-Core's 2021 ends at ₱66,557 with the cap and ₱102,431 without it.

5. Monthly % with a fresh ₱10,000 every January: compounding every trade

Each row is a separate ₱10,000 account that starts on 1 January. Percent change of the balance by month.

I-Core's year results depend heavily on one or two giant months (Dec 2021, Nov 2025, Sep 2026). Take those out and its totals look much closer to BB-Core's, or worse.

7. How these numbers were made, and what they leave out

Method

- **Trades:** the real backtest code of each bot (`lucidio-core.js` for BB-Core, `icore-core.js` for I-Core), unchanged, on the stored 4-hour Binance candles for SOL, ZEC, NEAR, ADA and GALA. Exchange fees, slippage and funding are already in each trade's result (R).
- **Money:** each trade's R is multiplied by the amount risked when it opened: the smaller of the risk % times the balance at that moment, and the $10 cap. All five coins share one balance. Trades are processed in time order, and a trade only changes the balance once it closes.
- **Halt rule:** no new trade once the account is 39R (BB-Core) or 35R (I-Core) below its best point. It never triggered here.
- **Section 3** uses each bot's bot-config.json (start $100, 0.5% risk, $10 cap) in one continuous account. **Sections 4 to 6** use the live 2.5% risk and ₱10,000 (about $159), reset every 1 January, at ₱63 to the dollar. A year's account only includes trades that opened and closed within that year.

What it leaves out

- **Contract sizes.** MEXC sells whole contracts. At ₱10,000 the risk per trade is only about $4, so some trades could not be opened or would be sized off-target. Early months would be lumpier and probably lower.
- **Hindsight.** The coins and rule settings were chosen on this same history. Treat the figures as an upper bound, not a forecast.
- **Free margin and late entries.** The live bot skips trades when margin is short or the entry is more than 15 minutes late. Not modelled.
- **Two bots, two accounts.** The bots are shown separately. Running both on one account would share the same balance.
- **No performance fee.** All figures are before the 20% fee in the ledger.
- **One fixed exchange rate** (₱63 to the dollar) for every year.

> **This is a test on past prices, not a promise.** Real results will differ, and you can lose a large part or all of the money you put in. Only use money you can afford to lose.
