PAST-PRICE TEST · STRATEGY REPORT

The four-coin system at 5% risk

SOL, ZEC, NEAR and ADA tested on real market data from March 2020 to 20 October 2026, about 6½ years, starting with ₱5,000. Shown two ways: a **fresh ₱5,000 every January** and **compounding** year to year.

₱5,000	+₱102,197	₱56,130,897	7 / 7
BASELINE BALANCE	TOTAL PROFIT, FRESH ₱5,000 EACH YEAR (7 YEARS)	FINAL BALANCE IF COMPOUNDED	PROFITABLE YEARS

+292%	51 / 70	−54%	1,265
AVERAGE PER YEAR, FRESH ₱5,000	PROFITABLE MONTHS (2021 ON)	WORST DROP FROM A HIGH IN A YEAR	TRADES TAKEN

Before the 20% fee. Every peso figure in this report is the trading result **before** the 20% performance fee, so it is directly comparable to the strategy's raw numbers. The investor report ("What ₱1,000 could have become") shows results after that fee. Trading costs (exchange fees, slippage, funding) **are** included here.

How it works, in plain words

A fixed set of rules run by a computer on four large, liquid coins. It never guesses and has no emotions.

1

Four coins, one rule

Solana, Zcash, NEAR and Cardano. On the 4-hour chart the system trades when price closes beyond its Bollinger Band in the direction of the 200-period trend, both long and short.

2

5% risked per trade

Every trade has its exit for a loss set before it opens, placed so the loss is **5% of the account** (₱250 on ₱5,000). Wins are targeted at 4 times that risk.

3

Two ways to size

Fresh: every 1 January the account is reset to ₱5,000. **Compounding:** every 1 January the 5% is recalculated from the new, larger balance.

What to expect

- **Most trades lose.** Only about 39% win. Wins average +2.3R and losses −0.95R, so the wins pay for everything.
- **The balance dips below the start in almost every first year.** 63 of 69 possible starting months went below the starting balance at some point, by about ₱1,256 on average.
- **It works in both directions.** Longs and shorts both made money; shorts carried the 2022 bear market.
- **The edge is slowly shrinking.** Profit factor went from 1.94 in 2021 to 1.36 in 2026.

Download PDF

Fresh ₱5,000 each year vs compounding

Same trades, same signals. The only difference is how big each trade is. In both versions 5% of the account is risked per trade, so the percent return of each year is identical. Only the peso amounts differ.

Version 1: fresh ₱5,000 every January

YEAR	STARTS AT	RISK PER TRADE	PROFIT	RETURN	ENDS AT
2020*	₱5,000	₱250	+₱10,421	+208%	₱15,421
2021	₱5,000	₱250	+₱27,713	+554%	₱32,713
2022	₱5,000	₱250	+₱11,822	+236%	₱16,822
2023	₱5,000	₱250	+₱13,067	+261%	₱18,067
2024	₱5,000	₱250	+₱15,373	+307%	₱20,373
2025	₱5,000	₱250	+₱14,099	+282%	₱19,099
2026†	₱5,000	₱250	+₱9,701	+194%	₱14,701
Total			**+₱102,197**		

Version 2: compounding, ₱5,000 once and everything kept in

YEAR	STARTS AT	RISK PER TRADE	PROFIT	RETURN	ENDS AT
2020*	₱5,000	₱250	+₱10,421	+208%	**₱15,421**
2021	₱15,421	₱771	+₱85,472	+554%	**₱100,893**
2022	₱100,893	₱5,045	+₱238,559	+236%	**₱339,452**
2023	₱339,452	₱16,973	+₱887,101	+261%	**₱1,226,553**
2024	₱1,226,553	₱61,328	+₱3,771,125	+307%	**₱4,997,678**
2025	₱4,997,678	₱249,884	+₱14,092,723	+282%	**₱19,090,401**
2026†	₱19,090,401	₱954,520	+₱37,040,496	+194%	**₱56,130,897**
Total	**₱5,000**		**+₱56,125,897**		**₱56,130,897**

* 2020 starts in March (ZEC and ADA first signals 8–12 March; SOL in October; NEAR in November). † 2026 runs to 20 October.

Fresh ₱5,000 each year

You start every January with exactly ₱5,000 and risk a flat **₱250** per trade all year. Profit is paid out or set aside at year end.

- Total profit **+₱102,197**
- Average year **+₱14,600** (+292%)
- Best year +₱27,713 (2021), weakest +₱9,701 (2026)
- Lowest balance reached: **₱2,294** (2024)

Compounding year to year

Start with ₱5,000 and keep everything in. On each 1 January the 5% is recalculated, so risk per trade grows from ₱250 to **₱954,520**.

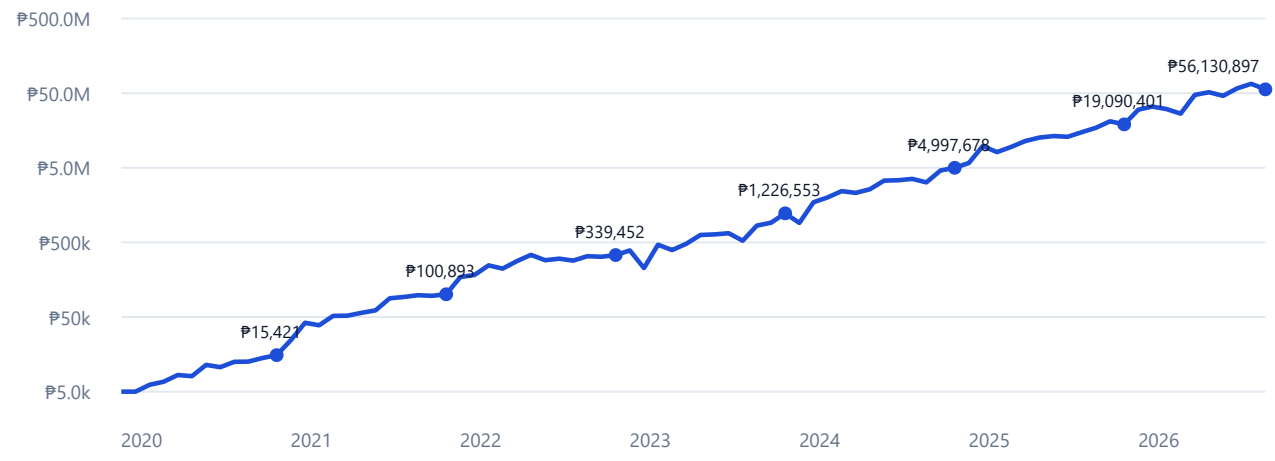

- Final balance **₱56,130,897** (×11226.2)
- Biggest single-year gain: +₱37,040,496
- Worst drop in pesos: **₱17,419,263** (2026)
- Percent drops are the same as fresh, but each one costs far more pesos as the account grows

Treat the compounding figure as a ceiling, not a forecast. It assumes the 2020–2026 pattern repeats, the coins stay liquid at ever bigger size, and nothing is withdrawn. A ₱56,130,897 result would need position sizes the order books of these coins cannot fill without moving price. Use the fresh table to judge what to expect, and the compounding table to compare risk levels.

Download PDF

Growth of ₱5,000

Compounding version: balance at the end of every month, before the 20% fee. The scale grows evenly in percentage terms, so the same percent gain looks the same size in 2021 as in 2025. Dots show each year-end.

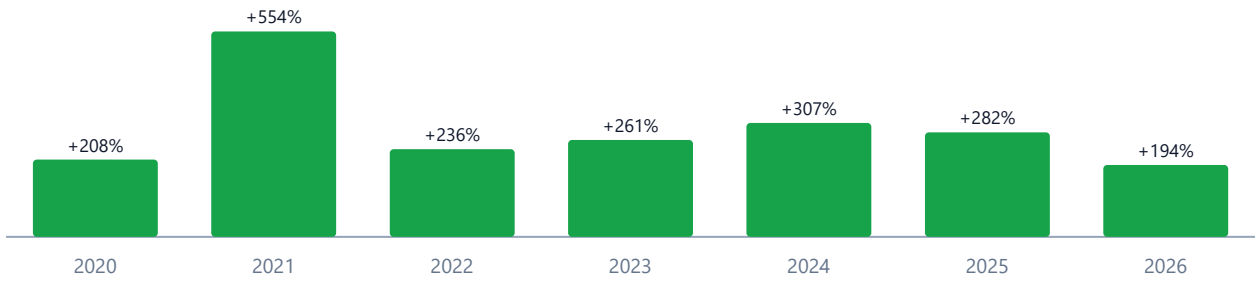

Profit each year with a fresh ₱5,000

Every bar starts from the same ₱5,000, so the bars show what each market year was worth on its own. 2021 was the bull run; since 2022 the range has been steady.

Return each year, same in both versions

* partial year (from March) † to 20 October

Download PDF

Year by year: fresh ₱5,000 each year

Flat ₱250 risked per trade. Trades are counted in the year they close.

Results

YEAR	PROFIT	RETURN	TRADES	WIN RATE	PROFIT FACTOR	AVG R / TRADE	HIT THE 4R TARGET	LONGEST LOSING STREAK
2020	+₱10,421	+208%	100	36%	1.71	+0.42	19	9
2021	+₱27,713	+554%	207	42%	1.94	+0.54	48	9
2022	+₱11,822	+236%	183	43%	1.47	+0.26	21	16
2023	+₱13,067	+261%	197	36%	1.45	+0.27	31	15
2024	+₱15,373	+307%	205	38%	1.51	+0.30	31	9
2025	+₱14,099	+282%	201	37%	1.47	+0.28	31	12
2026	+₱9,701	+194%	172	38%	1.36	+0.23	23	14

Risk and the ups and downs

YEAR	WORST DROP FROM A HIGH	IN PESOS	LOWEST BALANCE	PROFITABLE MONTHS	BEST MONTH	WORST MONTH
2020	−21%	−₱2,422	₱5,000	8/10	Jul +₱3,324	Aug −₱743
2021	−19%	−₱2,475	₱5,000	10/12	Aug +₱8,858	Mar −₱1,044
2022	−23%	−₱4,033	₱4,184	8/12	Jan +₱3,533	Jul −₱2,578
2023	−51%	−₱4,132	₱3,345	9/12	Oct +₱4,660	Feb −₱2,418
2024	−54%	−₱2,706	₱2,294	9/12	Nov +₱5,702	Oct −₱1,425
2025	−20%	−₱3,867	₱4,226	9/12	Feb +₱4,023	Dec −₱1,887
2026	−43%	−₱4,562	₱4,745	6/10	May +₱5,483	Oct −₱2,776

How to read this. “Worst drop from a high” is the biggest fall from the account's highest point so far that year. “Lowest balance” is the lowest the account ever got, on a ₱5,000 start. **2023 and 2024 are the stress years:** the account fell to ₱3,345 and ₱2,294 before ending the year at ₱18,067 and ₱20,373.

What the numbers say

- **2021** is the outlier: +554% on the bull run, with the best month (August, +₱8,858).
- **2022** had the longest losing streak (16 trades in a row) but still finished +₱11,822 because short trades paid in the bear market.
- **Profit factor** (money won ÷ money lost) fell from 1.94 in 2021 to 1.36 in 2026. Still above 1, but the margin is thinner.
- **Only about 39% of trades win.** That is normal for this style: small frequent losses, occasional big wins.

Download PDF

Year by year: compounding

Each January the risk per trade is reset to 5% of the balance on that day, then held flat for the year. Percent results match the fresh version; the pesos grow.

YEAR	STARTS AT	RISK PER TRADE	PROFIT	RETURN	ENDS AT	MULTIPLE OF START
2020	₱5,000	₱250	+₱10,421	+208%	**₱15,421**	×3.08
2021	₱15,421	₱771	+₱85,472	+554%	**₱100,893**	×6.54
2022	₱100,893	₱5,045	+₱238,559	+236%	**₱339,452**	×3.36
2023	₱339,452	₱16,973	+₱887,101	+261%	**₱1,226,553**	×3.61
2024	₱1,226,553	₱61,328	+₱3,771,125	+307%	**₱4,997,678**	×4.07
2025	₱4,997,678	₱249,884	+₱14,092,723	+282%	**₱19,090,401**	×3.82
2026	₱19,090,401	₱954,520	+₱37,040,496	+194%	**₱56,130,897**	×2.94

Risk in pesos as the account grows

YEAR	WORST DROP FROM A HIGH	IN PESOS	LOWEST BALANCE	LOWEST VS. START OF YEAR	LONGEST LOSING RUN
2020	−21%	−₱2,422	₱5,000	never below start	9 trades
2021	−19%	−₱7,634	₱15,421	never below start	9 trades
2022	−23%	−₱81,384	₱84,425	−16%	16 trades
2023	−51%	−₱280,541	₱227,067	−33%	15 trades
2024	−54%	−₱663,755	₱562,798	−54%	9 trades
2025	−20%	−₱3,865,056	₱4,224,439	−15%	12 trades
2026	−43%	−₱17,419,263	₱18,117,560	−5%	14 trades

Why the percentages stay the same but the pain grows. A −54% drop in 2024 cost ₱663,755, while the same kind of fall in 2021 cost only ₱7,634. If you compound, the biggest peso losses always come in the later, larger years, exactly when it feels least safe to lose them.

One more thing. Year-end compounding is a simplification. If you re-size more often (after every trade), growth is faster on the way up and drops are deeper on the way down. The numbers above are the gentler version.

Which calendar months are best and worst?

Every January together, every February together, and so on, for 2021 to 2026 (fresh ₱5,000). With only five or six of each, treat this as a description, not a rule.

MONTH	AVERAGE	MEDIAN	PROFITABLE YEARS	WORST (YEAR)	BEST (YEAR)	TRADES	WIN RATE	AVG R	RANK
Jan	+₱1,606	+₱1,839	5/6	−₱1,283 (2024)	+₱3,533 (2022)	19	41%	+0.34	#6
Feb	+₱1,990	+₱2,061	5/6	−₱2,418 (2023)	+₱5,659 (2021)	14	41%	+0.56	#2
Mar	+₱719	+₱229	3/6	−₱1,688 (2025)	+₱3,498 (2023)	16	36%	+0.18	#9
Apr	+₱691	+₱181	3/6	−₱1,112 (2022)	+₱4,211 (2021)	17	34%	+0.16	#10
May	+₱1,862	+₱1,585	5/6	−₱496 (2024)	+₱5,483 (2026)	17	44%	+0.43	#4
Jun	+₱1,691	+₱1,409	6/6	+₱1,046 (2026)	+₱2,973 (2022)	15	42%	+0.45	#5
Jul	+₱247	+₱383	4/6	−₱2,578 (2022)	+₱3,173 (2024)	16	33%	+0.06	#12
Aug	+₱2,143	+₱543	5/6	−₱317 (2025)	+₱8,858 (2021)	17	47%	+0.52	#1
Sep	+₱545	+₱984	4/6	−₱2,039 (2023)	+₱2,312 (2026)	17	32%	+0.13	#11
Oct	+₱1,059	+₱1,831	4/6	−₱2,776 (2026)	+₱4,660 (2023)	18	34%	+0.24	#8
Nov	+₱1,933	+₱1,084	3/5	−₱599 (2021)	+₱5,702 (2024)	17	42%	+0.45	#3
Dec	+₱1,356	+₱1,500	4/5	−₱1,887 (2025)	+₱4,573 (2023)	18	41%	+0.31	#7

Strongest: Aug, Feb, Nov, May. **Weakest:** Jul, Sep, Apr, Mar. **Jun** was positive every year it was tested.
But it is probably noise. We shuffled the 70 monthly results randomly across the calendar 5,000 times. A gap between best and worst month as large as the real one (₱1,897) appeared **96%** of the time by pure chance. One huge month moves a monthly average a lot: August's average is mostly August 2021 (+₱8,858), and its median is only +₱543. **Do not time the start or stop of trading by the calendar.**

Download PDF

The shape of a typical month

70 months from January 2021 to October 2026, fresh ₱5,000.

73%	+₱1,311	−₱1,317	2
MONTHS THAT MADE MONEY	AVERAGE MONTH	AVERAGE LOSING MONTH	MOST LOSING MONTHS IN A ROW

How the months were spread

MONTHLY RESULT	MONTHS
Worse than −₱500	16
−₱500 to −₱100	3
−₱100 to ₱0	0
₱0 to +₱1,000	12
+₱1,000 to +₱2,500	20
Above +₱2,500	19

Median month +₱1,257. Losing months are usually small, but 16 of them lost more than ₱500, which is 10% of the account.

Worst three-month stretches

STRETCH	RESULT
2022-07 → 2022-09	−₱2,765
2023-07 → 2023-09	−₱1,525
2026-02 → 2026-04	−₱939
2022-12 → 2023-02	−₱708
2024-08 → 2024-10	−₱690

5 of 68 three-month stretches lost money. The 2022 summer stretch is the one to remember.

Ten worst months

MONTH	RESULT	COINS WINNING
2021-08	+₱8,858	4 of 4
2024-11	+₱5,702	4 of 4
2021-02	+₱5,659	4 of 4
2026-05	+₱5,483	4 of 4
2023-10	+₱4,660	4 of 4
2023-12	+₱4,573	4 of 4
2021-04	+₱4,211	4 of 4
2025-02	+₱4,023	4 of 4
2025-11	+₱3,788	4 of 4
2022-01	+₱3,533	4 of 4

The worst months are the ones where all four coins lose together: 2022-07 (−₱2,578), 2023-02 (−₱2,418), 2026-10 (−₱2,776). That happened in 3 of 70 months, and in 12 months at least three of the four lost. Spreading across four coins helps most months, but not when the whole market turns against the system at once. **27% of months lose money, and they come singly or in pairs, never more than 2 in a row.**

Download PDF

Does the month you start in matter?

Start with ₱5,000 on the 1st of a month, risk a flat ₱250 per trade, and take only trades opened after that date. Each month was tried as a start date in every year from 2021 to 2026 (69 start dates in all).

25/69
STARTS NEGATIVE AFTER 1 MONTH

8/67
NEGATIVE AFTER 3 MONTHS

1/64
NEGATIVE AFTER 6 MONTHS

0/58
NEGATIVE AFTER 12 MONTHS

Reading the table. “Negative” means the account was below its starting ₱5,000 at that point. “Dip” is the lowest the account got at any time in the first year, measured from ₱5,000. “Days to recover” is how long it took to get back above the start after first dropping under it.

Download PDF

Starting out: what to expect

The same start-date test, boiled down to what a new account should plan for.

63/69	−₱1,256	+₱14,599	+₱4,230
STARTS THAT WENT BELOW ₱5,000 AT SOME POINT	AVERAGE DIP IN THE FIRST YEAR	AVERAGE AFTER 12 MONTHS	WORST 12-MONTH RESULT

Eight roughest starts

START	DEEPEST DIP	RECOVERED
2026-02-01	−₱4,562 (-91%)	110 days
2025-12-01	−₱4,122 (-82%)	67 days
2026-07-01	−₱3,640 (-73%)	60 days
2022-07-01	−₱3,590 (-72%)	104 days
2024-01-01	−₱3,097 (-62%)	48 days
2026-06-01	−₱3,013 (-60%)	5 days
2024-08-01	−₱2,897 (-58%)	107 days
2026-04-01	−₱2,877 (-58%)	9 days

The deepest was 2026-02: the account fell to ₱438, a 91% loss, and took 110 days to recover.

12-month outcomes, all starts

MEASURE	RESULT
Starts measured	58
Best 12 months	+₱27,599
Median 12 months	+₱14,611
Worst 12 months	+₱4,230
12-month results below zero	0

What this means

- **Starting negative is normal.** About one start in three (25 of 69) is below the starting balance after the first month, and nearly every start dips at some point in the first year.
- **It does not stay that way.** By six months only 1 of 64 starts were still underwater, and no start finished its first twelve months in the red.
- **July and March were the roughest starting months.** July is the only month with a negative average first month and the deepest average dip. March had the most negative first months (4 of 6). With six tries each, this is a pattern to be aware of, not a rule.
- **October, May and January were the gentlest.**
- **The real risk is the size of the dip, not whether it happens.** At 5% risk the rough starts lost 72% to 91% of the account before recovering. Only start with money you can leave alone through that.

Download PDF

The four coins

Profit by coin per year on the fresh ₱5,000 version. First signals: SOL 2020-10-19, ZEC 2020-03-12, NEAR 2020-11-21, ADA 2020-03-08.

COIN	2020	2021	2022	2023	2024	2025	2026	TOTAL	PROFITABLE MONTHS	BEST CALENDAR MONTH	WORST CALENDAR MONTH
SOL	+₱1,502	+₱6,685	+₱3,235	+₱8,236	+₱2,124	+₱2,026	+₱2,802	+₱26,610	43/70	Jan +₱4,133	Dec −₱725
ZEC	+₱4,024	+₱9,486	+₱869	+₱215	+₱6,376	+₱6,351	+₱2,267	+₱29,587	48/70	May +₱6,372	Nov −₱76
NEAR	+₱437	+₱5,422	+₱3,388	+₱939	+₱3,023	+₱1,921	+₱4,352	+₱19,484	42/70	Dec +₱4,380	Jul −₱888
ADA	+₱4,458	+₱6,121	+₱4,330	+₱3,676	+₱3,850	+₱3,800	+₱281	+₱26,515	48/70	Nov +₱4,810	Mar −₱950

How much the coins move together

PAIR	MONTHLY CORRELATION
SOL – ZEC	0.05
SOL – NEAR	0.30
SOL – ADA	0.37
ZEC – NEAR	0.19
ZEC – ADA	0.16
NEAR – ADA	0.27

0 means unrelated, 1 means identical. Everything is below 0.4, and **SOL and ZEC are almost independent (0.05)**. That is why the portfolio is steadier than any single coin.

Coins covering for each other

- **ZEC** made almost nothing in 2022–23 (+₱869, +₱215); SOL carried 2023 with +₱8,236.
- **SOL** was weaker in 2024–25; ZEC made +₱6,376 and +₱6,351.
- **ADA** is the steadiest, +₱3,676 or more every year until 2026, then only +₱281. **Worth watching.**
- **NEAR** is the smallest earner but positive every year.

> **When they all lose together.** In 3 months (2022-07, 2023-02, 2026-10) every coin lost at once, and in 12 of 70 months at least three did. Those were the worst months of the whole test. Diversifying over four coins reduces risk, it does not remove it.

Download PDF

Inside the trades

1,165 trades from 2021 onward, fresh ₱5,000 (₱250 per trade). R means "multiples of the amount risked": +4R is a win of four times the risk, −1R a full loss.

39%	+2.31R	-0.95R	16.6
WIN RATE	AVERAGE WIN	AVERAGE LOSS	TRADES PER MONTH

Long vs short

SIDE	TRADES	WIN RATE	AVG R	PROFIT

Q2	295	40%	+0.35	+₱25,469
Q3	297	37%	+0.24	+₱17,612
Q4	279	39%	+0.33	+₱22,800

How trades ended

EXIT	TRADES	WIN RATE	AVG R	PROFIT
Closed by time limit	347	77%	+0.84	+₱73,171
Hit the 4R target	185	100%	+3.93	+₱181,926
Still open at end	1	0%	−0.60	−₱150
Stopped out	632	0%	−1.03	−₱163,171

By day of entry (UTC)

DAY	TRADES	WIN RATE	AVG R	PROFIT
Sun	121	33%	+0.12	+₱3,549
Mon	258	28%	+0.03	+₱2,102
Tue	177	38%	+0.39	+₱17,073
Wed	151	38%	+0.36	+₱13,698
Thu	164	45%	+0.42	+₱17,373
Fri	195	51%	+0.65	+₱31,496
Sat	99	44%	+0.26	+₱6,484

Long vs short, year by year

YEAR	LONG TRADES	LONG PROFIT	LONG AVG R	SHORT TRADES	SHORT PROFIT	SHORT AVG R
2021	134	+₱23,417	+0.70	73	+₱4,296	+0.24
2022	60	−₱3,659	−0.24	123	+₱15,482	+0.50
2023	106	+₱9,503	+0.36	91	+₱3,564	+0.16
2024	100	+₱7,189	+0.29	105	+₱8,184	+0.31
2025	93	+₱4,631	+0.20	108	+₱9,468	+0.35
2026	96	+₱8,413	+0.35	76	+₱1,289	+0.07

Where the money comes from. 185 trades reached the 4R target and 347 were closed by the 8-day time limit mostly in profit; together they pay for the 632 stop-outs. Winners last about 6.4 days and losers 3.1 days. The longest losing streak was **16 trades in a row**, a run that cost ₱4,033. Funding costs over the whole test: −₱3,498. Monday entries were the weakest and Friday the strongest, but with this sample size that is more likely noise than a rule.

Download PDF

Turning the risk dial: 2.5% vs 5%

Same four coins, same trades, with half the risk per trade (₱125 on ₱5,000). Profit and the size of every loss in pesos are cut exactly in half. The percent drop from a high shrinks by a little less than half, because the peaks it is measured from are lower too.

Fresh ₱5,000 each year

YEAR	PROFIT AT 2.5%	PROFIT AT 5%	WORST DROP AT 2.5%	WORST DROP AT 5%	LOWEST BALANCE AT 2.5%	LOWEST BALANCE AT 5%

Total / worst	**+₱51,098**	**+₱102,197**	**−30%**	**−54%**	**₱3,647**	**₱2,294**

Compounding

YEAR	ENDS AT (2.5%)	ENDS AT (5%)	WORST DROP IN PESOS (2.5%)	WORST DROP IN PESOS (5%)
2020	₱10,210	**₱15,421**	−₱1,211	−₱2,422
2021	₱38,507	**₱100,893**	−₱2,527	−₱7,634
2022	₱84,031	**₱339,452**	−₱15,530	−₱81,384
2023	₱193,831	**₱1,226,553**	−₱34,724	−₱280,541
2024	₱491,806	**₱4,997,678**	−₱52,446	−₱663,755
2025	₱1,185,216	**₱19,090,401**	−₱190,174	−₱3,865,056
2026	₱2,335,033	**₱56,130,897**	−₱540,732	−₱17,419,263

What changes with the dial. At 2.5% the typical year earns about ₱7,300 on ₱5,000 (+146%) instead of ₱14,600, and the worst fall from a high drops from 54% to 30%. The account's lowest point in the worst year goes from ₱2,294 to ₱3,647. Profit is cut in half, and so is the worst loss in pesos (from ₱2,706 to ₱1,353 below the start).

How to choose

- **5%** is the aggressive setting. It roughly doubles profit, but the account has fallen by more than 50% from a high within a single year, and some starting months lost over 91% before recovering.
- **2.5%** keeps most of the same shape of results with drops that are far easier to sit through. Slower, but easier to stay with.
- Pick the setting by the largest loss you could live with, not by the best-looking profit column.

Download PDF

How this was tested, and what it cannot tell you

Method

- **Data:** real 4-hour candles for SOL, ZEC, NEAR and ADA from Binance futures, March 2020 to 2026-10-20.
- **Rules (never changed during the test):** a 4-hour candle closes beyond the Bollinger Band (20, 2) in the direction of the 200-candle average; the stop is the middle band; the target is 4 times the stop distance; any trade still open after 48 candles (8 days) is closed. Entry on the next candle's open. Long and short.
- **Costs included:** exchange fees (0.05% entry and stop, 0.02% target), slippage (0.02%) and the real funding rate paid on every open trade.
- **One trade at a time per coin;** four coins can be open together, so up to 20% of the account is at risk at once at 5%.
- **Sizing:** "Fresh" risks a flat 5% of ₱5,000 (₱250) on every trade of the year. "Compounding" risks 5% of the balance on each 1 January.
- **Not included:** the 20% performance fee, tax, deposit and withdrawal costs, and anything that happens between the 4-hour candles.

What it cannot tell you

- **The four coins were chosen after seeing results.** That makes the test look better than live trading is likely to be. The edge has been shrinking since 2021.
- **Real fills can be worse** in fast markets, especially on bigger positions. The compounding numbers get less realistic the larger the account.
- **Six and a half years is one market cycle.** A longer sideways or very different market is not in this data.
- **Calendar and weekday patterns are not reliable.** Tests show they are consistent with chance.
- **Backtests are simulations,** not a record of real trades.

> **Past results do not guarantee future returns.** Only use money you can afford to lose. The test shows a system that made money in every year it was tested, but also one that regularly falls 20% to 50% below its high before recovering.

Worst-case start: a year's whole loss comes first

What if the worst losing stretch of every year hit on the very first trades, with no profit built up yet to cushion it? Start with ₱30,000, risk 5% of the current balance on every trade, and compound after every single trade.

₱30,000
STARTING BALANCE

₱17,046
LOWEST POINT, NORMAL ORDER (2024)

₱8,105
LOWEST POINT, WORST STRETCH FIRST (2023, −73%)

Same
FINAL RESULT EITHER WAY

How the test works. For each year we find the worst stretch of trades, the run from the account's highest point down to its lowest point that year. We move that whole stretch to the **start of the year** and keep every other trade in its original order after it. Every trade then risks 5% of the balance **at that moment**, so wins and losses compound trade by trade, not month by month or year by year. Nothing is invented: the trades, wins and losses are exactly the same ones, only the order changes.

The worst stretch in each year

YEAR	FROM	TO	TRADES IN THE STRETCH	OF WHICH LOSSES	OF WHICH WINS	NET LOSS IN R
2020	2020-08-01	2020-08-25	9	9	0	−9.7R
2021	2021-03-09	2021-04-04	11	10	1	−9.9R
2022	2022-10-20	2022-11-08	16	16	0	−16.1R
2023	2023-03-10	2023-05-06	35	29	6	−16.5R
2024	2023-12-24	2024-01-19	15	14	1	−10.8R
2025	2025-12-01	2025-12-29	20	18	2	−15.5R
2026	2026-02-10	2026-05-05	51	40	11	−18.2R

R = multiples of the amount risked. −10R at 5% per trade is about −40% of the account once compounded. The longest stretch is 2026: 51 trades over about two months.

Fresh ₱30,000 every January, normal order (as it happened)

YEAR	LOWEST POINT	WORST DROP FROM A HIGH	ENDS AT	RETURN
2020	₱30,000 (0%)	−39%	**₱151,726**	+406%
2021	₱30,000 (0%)	−40%	**₱2,662,188**	+8,774%
2022	₱25,211 (−16%)	−61%	**₱173,339**	+478%
2023	₱20,066 (−33%)	−60%	**₱189,536**	+532%
2024	₱17,046 (−43%)	−47%	**₱286,288**	+854%

2026	₱17,916 (−40%)	−40%	**₱66,758**	+123%

Download PDF

Carried year to year, worst stretch first (5%)

YEAR	STARTS AT	LOWEST POINT	WORST DROP FROM A HIGH	ENDS AT	RETURN
2020	₱30,000	₱18,230 (−39%)	−39%	**₱151,726**	+406%
2021	₱151,726	₱91,129 (−40%)	−40%	**₱13,464,065**	+8,774%
2022	₱13,464,065	₱4,943,580 (−63%)	−63%	**₱77,795,120**	+478%
2023	₱77,795,120	₱21,018,935 (−73%)	−73%	**₱491,498,988**	+532%
2024	₱491,498,988	₱279,262,387 (−43%)	−47%	**₱4,690,334,775**	+854%
2025	₱4,690,334,775	₱1,792,641,704 (−62%)	−62%	**₱35,318,795,201**	+653%
2026	₱35,318,795,201	₱11,808,581,841 (−67%)	−67%	**₱127,645,571,754**	+261%

Normal order ends at ₱127,645,571,754; worst-stretch-first ends at ₱127,645,571,754. **Identical.** These billions are not achievable: it assumes compounding every trade at 5% for six years with no limit on position size. They are shown only to prove that the order of trades does not change the end result.

What this tells you

- **The end result does not change, the ride does.** Compounding multiplies each trade's result, and multiplication has no order. What changes is how far the balance falls before it starts to recover.
- **Worst case at 5%:** the account falls to **₱8,105** in 2023, a loss of **73%** of ₱30,000, against ₱17,046 (43%) in the normal order.
- **Worst case at 2.5%:** ₱16,180 in 2023 (−46%), so halving the risk cuts the worst-case loss from 73% to 46%.
- **Per-trade compounding protects the account from a wipe-out** because each loss is 5% of what is left. Losses get smaller as the balance falls, which is why the worst case stays under about 80% instead of reaching 100%. The trade-off is that gains also compound more slowly while the balance is down.
- **Sizing detail:** trades are sized one after another in the order they closed. In real trading two or three trades are often open at once and sized from the same balance, so a real run can fall slightly further than shown.
